VRLink

Science & Heritage Cluster

Modelling, Interpretation and Alternate Representations:
Visualization technology, Heritage Buildings & Coastal Threats

A joint "Science & Heritage Cluster" and VRLink workshop.

Bringing together Industry, Charities and Institutions to discuss Virtual Reality techniques and ideas for Science and Heritage applications.

Virtual Heritage

workshop 22-23 March 2010

The aim of this workshop is to bring together a rich mixture of skills and interests.

Scientists with technical solutions and end users with challenges.

<http://heritage.cs.bangor.ac.uk>

All heritage interpretation is complex. It is often based on uncertain information, or information extrapolated from other sites. Sites may cover many periods or have had varying functions.

Consequently there may be different possible interpretations; differing opinions; different stories to tell (multivocality); different technologies to survey the site; different algorithms to analyse the data; several ways to visualize the data; and many ways to depict, display and present the information.

There are many display technologies to display and interact with heritage information, from mobile devices, larger desktop screens, massive Powerwall displays, tangible models to virtual walkthroughs in a virtual-world.

VENUE

Technium CAST, Ffordd Penlan, Parc Menai Business Park, Bangor, Gwynedd. LL57 4HJ
Tel: 01248 675 000 Fax: 01248 675 012
